

2019 Scheme

Q.P. Code: 214001

Reg. no.:

**Second Professional MBBS Degree Regular/Supplementary
Examinations January 2023
Pathology - Paper II
(Systemic Pathology)**

Time: 3 Hours

Total Marks: 100

- Answer all questions to the point neatly and legibly • Do not leave any blank pages between answers
- Indicate the question number correctly for the answer in the margin space
- Answer all parts of a single question together • Leave sufficient space between answers
- Draw table/diagrams/flow charts wherever necessary

Long Essays

(2x15=30)

1. A 42-year-old woman, who did not have a medical checkup for many years, noted the onset of post coital bleeding. On examination, she was found to have an ulcerated growth on the anterior lip of cervix.
 - (a) What is the likely diagnosis and why.
 - (b) How could this disease have been detected early.
 - (c) Discuss the etiopathogenesis of this disease.
 - (d) Describe the microscopic types of this lesion. **(2+4+6+3)**
2. Discuss the etiopathogenesis of Atherosclerosis. What are the possible complications that may arise due to the presence of these plaques in different arteries. Draw a labelled diagram depicting the histological appearance of the same. **(6+5+4)**

Short essays

(5x8=40)

3. Risk factors and classification of endometrial carcinoma
4. Define bronchiectasis. Add a note on its etiopathogenesis, morphological features and complications.
5. A 45-year-old male presents with a swelling over the right knee joint of three months duration. X-Ray reveals an expansile lytic lesion, predominantly in the epiphyseal region of right lower femur without any cortical breach. What is the likely diagnosis and why Describe the radiological, gross and microscopic findings in this condition. **(3+5)**
6. Gross and microscopic changes in kidney in a long standing case of Diabetes Mellitus.
